PrEP, short for pre-exposure prophylaxis, is a preventive treatment against HIV. It consists of two anti-viral drugs that together create a medicine that reduces the risk of contracting HIV*. To get PrEP prescribed, visit your doctor for an individual assessment.

*PrEP reduces the risk of contracting HIV but not other sexually transmitted infections. Condoms protects you from both HIV and other sexually transmitted infections.

Where to get PrEP in Västra Götaland

- You can only get PrEP if you are completely sure you do not have HIV.
- PrEP is highly effective, but does not protect 100%.
- For the treatment to work it needs to be consistent.
- Important with regular doctors appointments for follow-ups and testing.
